

# Pipol Dynamics NAV Localization Assessment

**Is your company considering embarking on an international Dynamics NAV implementation roll-out, to multiple countries? If so, be forewarned: the intricacies of localizations are often underestimated.**

Pipol is offering a brand-new Dynamics NAV Localization Assessment service to help you navigate the complexities.

## Never underestimate local complexity

The challenges of working with ERP solutions across borders are many. It's hard to stay on top of international regulatory requirements that vary widely from country to country. Working with multiple languages brings additional complications. And it's easy to underestimate the functional impact of localizations on financial solutions.

## The Pipol Dynamics NAV Localization Assessment is designed to support you

How does it work? First, we'll look at the specific countries where your roll-out is planned, and we'll align localization packages. Then we'll delve into the assessment itself, taking into account the drivers for building the approach and trade-offs (localization strategies versus application architecture). We'll help you increase control, improve efficiency, and boost collaboration across multiple sites and cultures. You'll be positioned to manage your international project more efficiently and cut costs.
