

# Pipol ERP Diagnostic Workshop

**International Dynamics implementations are tricky. So, what if there was a smarter, more structured way to define the scope, budget, and planning around your implementation? Thankfully, now there is.**

Pipol is pleased to announce our new ERP Diagnostic Workshop, designed to help companies like yours successfully do an international implementation.

## Make better-informed implementation decisions

Drawing on many years of in-depth product and implementation experience, Pipol's Diagnostic Workshop has been carefully crafted to help position your company for success. We'll ensure that the proposed Dynamics solution is ready to be deployed internationally.

## Our ERP Diagnostic Workshop will guide you

We'll work closely with you to customize the Workshop, aligned with your specific business strategy and objectives. It will encompass a wide spectrum of requirements around business, process, interface and integration, data and data migration, reporting and infrastructure, project governance, and more.

## What you'll gain

At the conclusion of the Workshop, you'll walk away with a detailed Diagnostic Report, Project Plan, Project Charter, and project budget (including international cost break-down). It's everything you need to move forward towards a successful deployment, following best practices.
