

Pipol ERP Infrastructure Assessment

For decades, Pipol has worked with successful international ERP implementation. And we've learned that companies who embark on infrastructure projects are understandably perplexed about where to start. Which approach to take? Which cloud service to leverage (or on premise)? And what's the end goal?

There are so many questions to consider, and it's hard to keep track of it all. Thankfully, Pipol has launched a new ERP Infrastructure Assessment to simplify the process for you, effectively focusing your efforts.

What does the Pipol ERP Infrastructure Assessment encompass?

First, we'll align with your company's business objectives and perceived areas for improvement. Then we'll delve into the Assessment itself, taking into account everything from available deployment options, interconnectedness of applications and platforms, current inefficiencies and risks, and so much more. We'll discuss potential high-level solutions, and how they can add value to your business.

The take-aways

Upon completion of the Assessment, you'll get detailed documentation of a long-term plan and action items that will powerfully modernize your infrastructure and applications. With project prioritization, ROI cost projections, project governance, and platform recommendations, it's everything you'll need.
