

Pipol Cyber Security Services

Cyber-attacks are the #1 threat facing businesses this year. Even though cyber-attacks are growing more sophisticated and serious, your business can take measures to protect itself – whether you are a security-mature organization, or you have a new laser focus on cyber security, Pipol can help.

Our unbiased expert consulting can help you get an overview of your cyber security situation and assess your current strengths and vulnerabilities. We can help you set priorities, plan your spending and time investments, and ultimately protect and strengthen your business transformation. We offer three distinct cyber security services.

Incident response

The first steps that you take in reacting to an incident will determine the severity of the impact on your business. Our incident response investigators are on call 24/7 and are ready to provide incident management and technical assistance, ranging from providing instant remediation advice to conducting a detailed technical analysis.

GDPR and Data Protection Services

This service supports you at every stage of the GDPR compliance readiness process – from identifying sensitive data to helping you facilitate an understanding of privacy within your organization and spreading awareness about the legislative changes. It also helps you build a roadmap and assists in all aspects of remediation and compliance with GDPR.

Advanced Penetration Testing Services

Real attackers will aim to find the weakest link in your IT security by any means necessary. This service takes a holistic approach to penetration testing, in order to pinpoint all potential attack vectors and other focus areas in need of attention. This gives your business the most value for money.
